

Summary

Data analyst who builds optimized SQL queries and transforms results into executive Power BI dashboards that drive actionable business decisions. Proficient in SQL, Python, Power BI, and Tableau. Leverages capital markets experience to surface insights that improve operational efficiency and inform pricing strategy. Seeking a data-focused role in business intelligence or financial analytics.

Technical Skills

SQL (T-SQL): complex joins; CTEs; window functions; query optimization and optimized extracts (SSMS); multi-source views.

Power BI: data ingestion from SQL, DAX measures, data modeling, executive reports

Excel (advanced): daily ops reporting, ad-hoc analysis, revenue modeling

Python: Pandas, NumPy, Matplotlib — personal projects and ad-hoc scripting

Other Tools: PostgreSQL, MongoDB, Tableau, Git, Jupyter, VS Code

Experience

Rocket Mortgage

June 2020 – Present

Capital Markets Underwriter II

Rocket Mortgage

July 2024 – Present

- Manage full reporting lifecycle: collect and unify data, prepare it for analysis, and create easy-to-read dashboards and Excel reports that leadership uses to monitor pipeline health, operational performance, and revenue.
- Lead monthly leadership presentations and deliver executive reports that summarize performance trends, quantify program impact, and translate analytics into clear, prioritized actions.
- Lead the migration of Salesforce data into a centralized SQL reporting database and manage ongoing data quality, refreshes, and incident resolution as the primary data contact.
- Troubleshoot Qualified Mortgage failures and loan pricing/structure issues through analytical problem-solving and clear partner communication, delivering practical solutions that keep deals on schedule and preserve partner relationships.

Accomplishments:

- Conducted a SQL and Excel revenue analysis by product and loan-amount group that uncovered pricing misalignments, drove pipeline-wide repricing, and increased banker autonomy, streamlining the pricing process and improving the team's ability to close more loans.
- Built and deployed Power BI dashboards for Account Executives and Divisional VPs, turning pipeline and performance data into role-specific, actionable insights that enabled proactive account management and evidence-based decision making.
- Developed targeted Power BI dashboards (extension frequency; suspense rates; folder-received delays; underwriter interventions) that enabled focused, data-driven partner conversations and delivered a 5-7% reduction in pipeline extension rate.

Capital Markets Operations Specialist II

March 2021 – July 2024
